# CUSTOMIZED REPORTING

RISQ Management

WHAT IS CUSTOM REPORTING?

Custom reporting allows our team to consult with you and understand your company needs. We then create any style of report from your company data in an easy to analyze format.

WHY DO YOU NEED CUSTOM REPORTING?

You may be finding you need to collate multiple reports and information into one so you can get the necessary and critical information on your business reports. We provide a single view of the data, pre-formatted to deliver a consolidated report.

"Custom reporting is a valuable feature that gives you real-time insight into your business' current performance; in turn, these generated reports can be interrogated to help you improve your service and company offerings."

CUSTOM REPORTING SERVICE BENEFITS

- Ability to compare data sets from different systems allowing vital business decisions to be made
- View data in clear, understandable and a concise format
- Securely share data
- Create company-wide goals and determine performance measurements
- Cleanse data and update critical databases

CUSTOM REPORTING SERVICE OFFERINGS

- Combine data from GRC tools and other sources and existing databases to create views of KPI's and KRI's
- Create indexed reports, which will allow for quick navigation to specific 'needs' information
- Convert data into other formats e.g., CSV
- Data can be bookmarked and stored in an interactive format
- Risk, Audit, and Operational predictive modeling and optimization

HOW DO WE PERFORM CUSTOM REPORTING?

The RISQ Management Reporting platform creates the custom attribute report by utilizing automated intelligence to extract the source data and then import the data into a report file using a pre-processing program.

From there, we are able to add additional information related to your business.

- We export or publish the reports in the format your business needs to see them on a scheduled time plan
- We filter the data, allowing you only to see the information you require covered in a report
- We include other data so you can get reports showing a wider SLA, KRI, or KPI metric
